Water Management & Reuse

Most industrial sectors these days, including nitrogen fertilizer production, are experiencing growing economic, regulatory and environmental pressures to reduce water usage. Ensuring efficient use of current water supplies as well as reusing wastewater streams are two key strategies for dealing with this challenge. This session will discuss site-level initiatives and projects designed to improve water use efficiency as well as technologies being employed to treat and reuse wastewater streams. Advantages and challenges of the various initiatives, projects and technologies will be evaluated in an open discussion format. Please join us!
